Introduction

In order to make text useage within Maniaplanet more attractive, Nadeo has provided an extensive text interpreter which will let you manipulate your text entries on numerous occassions, such as your displayed username, your chat messages, your Mediatracker content etc pp...

Table of contents

Introduction
→ Control codes
→ Colours
→ Special characters (Unicode)

Control codes

$i: italic	**$m**: normal setting	$h: Internal link to a ManiaLink.
$s: shadowed	**$g**: default color	$l: External link to an URL.
$t: uppercase	**$z**: reset all	**Syntax examples**
$w: wide spacing	$$: to write a "$"	$h[creative]Visit manialink$h
$n: narrow spacing	$o: Bold with semi-wide spacing	$l[http://domain.com/]Visit website$l

A newly inserted control code affects all forthcoming letters unless a "reset control code" is used (**bold** in the list) or the same control code is used again.

Control codes are directly inserted into the text you are writing....

Example

$iThis is italic, $oThis is italic and bold, zo This is only bold will show

This is italic, ***This is italic bold***, **This is only bold**

Example

$L[http://www.mania-creative.com]Click here to visit our website$L will show

Click here to visit our website

Colours

Colour codes are basically control codes and inserted the same way. Only the colour of the text itself can be changed but not the text's background colour.

$000-$fff

The colour codes used in Trackmania are a 3-digit RGB hexadecimal value. RGB means that every colour you want is actually made of 3 components: Red,Green and Blue.

Example

$00f**H**$03f**E**$06f**L**$09f**L**$0cf**O** will show

HELLO

Colour chart

Use this simple colour chart to quickly chose the desired colour code (click to highlight)

Dark to Intense in steppings of 3 (0,3,6,9,C and F)
